DEBATE KIT: SHOULD SOCIAL MEDIA BE AGE RESTRICTED?

TEACHING RESOURCE

DEBATE KIT: SHOULD SOCIAL MEDIA BE AGE RESTRICTED? TEACHING RESOURCE

Introduction

In June 2024, there were growing calls for a ban on children aged under 16 accessing social media, with support on both sides of politics. Concerns were raised about the potential harm of social media including emotional distress, excessive screen time and heightened anxiety among young users. There was also concern about children seeing content that is not appropriate for their age.

Supporters of an age restriction argue that this measure would protect young children until they are equipped to navigate social media responsibly. Similar legislative considerations are underway in other countries including the United States of America, the United Kingdom, France and New Zealand.

People who didn't like the idea said it would be hard to make sure children followed the rules. They also said social media is good for young people to make friends and learn things.

To help consider the affirmative and negative arguments, this debate kit provides key points and website references about the debate topic to assist as starting points for research and debate planning. This kit is designed to accompany the Debating guide for classroom teachers booklet available at seriouslysocial.org.au.

Example arguments

Debate topic: Should social media be restricted to people 16 and older?

Affirmative arguments	Negative arguments
Using social media can make young people feel bad about themselves. Banning it until they are older would allow their brains to develop so that they can cope better when they see bad things online.	Putting age restrictions on social media use could cause young people to go online in secret and in doing so, they may be too scared to ask for support or assistance if they experienced trouble while online.
Social media can hurt children emotionally, so it is not right to let them use it knowing it can be bad for them.	A social media age ban would be difficult to enforce given current levels of technology.
Age restrictions would make it easier for parents to manage their children's online presence and behaviours.	An age ban could result in young people not developing the skills required to navigate social media spaces safely.
Studies around the world show that social media can make stereotypes about boys and girls worse. It can also affect what girls choose to do for work and how they learn.	Children use social media to talk to family and friends, find people who like the same things, feel like they belong, form likeminded communities and participate in learning. If they can't use it until they're older, they'll miss out on these good things.
Other comparable nations, including New Zealand, France, UK and USA are also currently debating social media bans for younger children.	Banning social media for children under 16 would take away parents' choice to decide if their kids are ready to use it.
Social media platforms use features designed to be addictive, meaning that the younger a person starts using social media, the earlier they will be hooked.	The responsibility for making social media spaces safe should be with the company that provides the platform.
Spending too much time looking at screens, like on social media, is reducing children's physical health and overall abilities. Australian teens were found to be some of the least active in the world in a study.	Parents should be more responsible in monitoring their children's social media use and restricting it if needed.
